Greg Considine

Software Engineer – Webroot Inc.

OBJECTIVE

My interest in software engineering blossomed into a passion and an obsession. I've become a fan, a hobbyist, and a tinkerer. I've come a long way since the creation of my first application, but I'm acutely aware of how much more there is to learn. I'm always on the hunt for ways to improve.

I'm currently looking to work and/or chat with professionals who share my passion for software engineering and full-stack web development.

WORK EXPERIENCE

MARCH 2014 – PRESENT

Webroot Inc.
Software Engineer

Developing robust web applications and bringing old projects into the modern age using current industry standards and best practices.

APRIL 2013 – MARCH 2014

Webroot Inc.
Software Engineer Intern

Full-stack web development. Worked mostly on internal web applications and data visualization projects. Introduced Git, dependency management tools, task automation, MVC architecture, responsive design, HTTP request optimization, versioning, and automated deployment.

NOVEMBER 2012 – PRESENT

Self-employed
Full-Stack Web Developer

I learned the basics of web development in my free time starting in mid-September of 2011. Since then, I've had a couple of professional opportunities to create and design websites from scratch. With the completion of every project, my understanding of web development increases tenfold and I'm always eager to get started on the next project to implement the new things I've learned along the way.
